

Gas tests

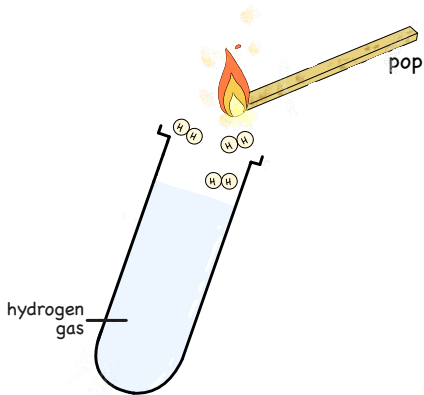

Gas tests

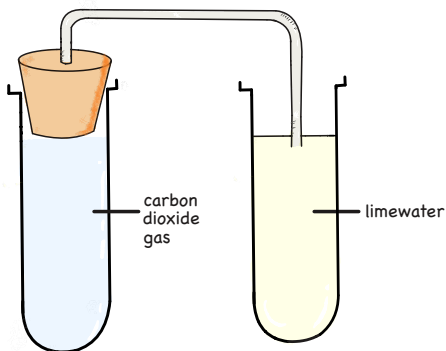

oxygen test

- a glowing splint is placed in the gas
- the glowing splint relights
- this shows that oxygen is present

hydrogen test

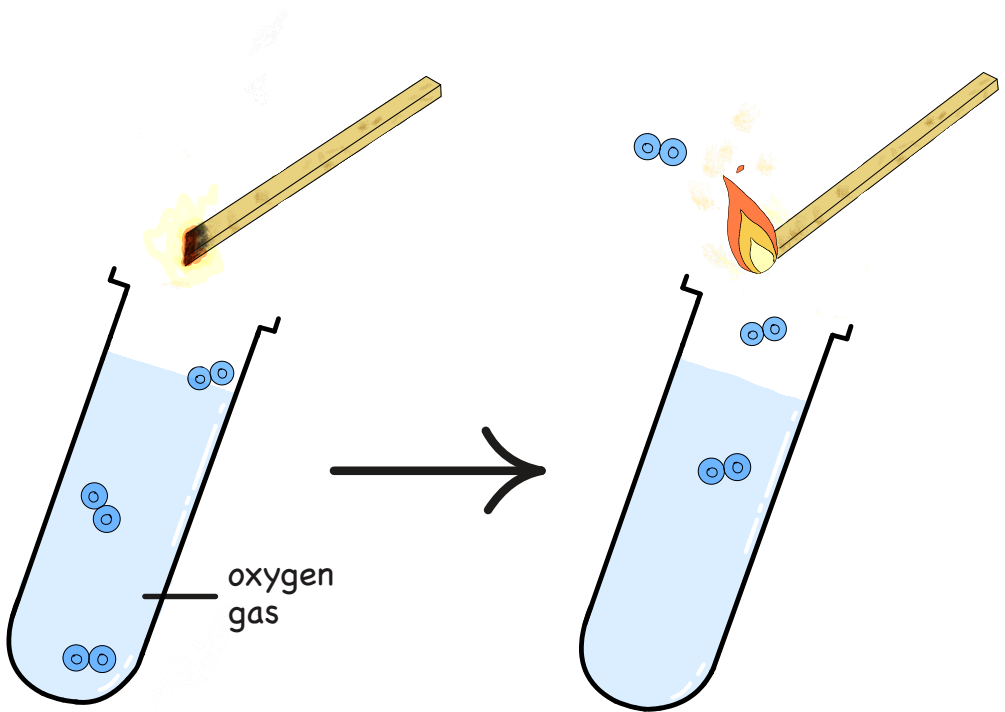

- a lit splint is placed in the gas
- a pop sound is heard
- this shows that hydrogen is present

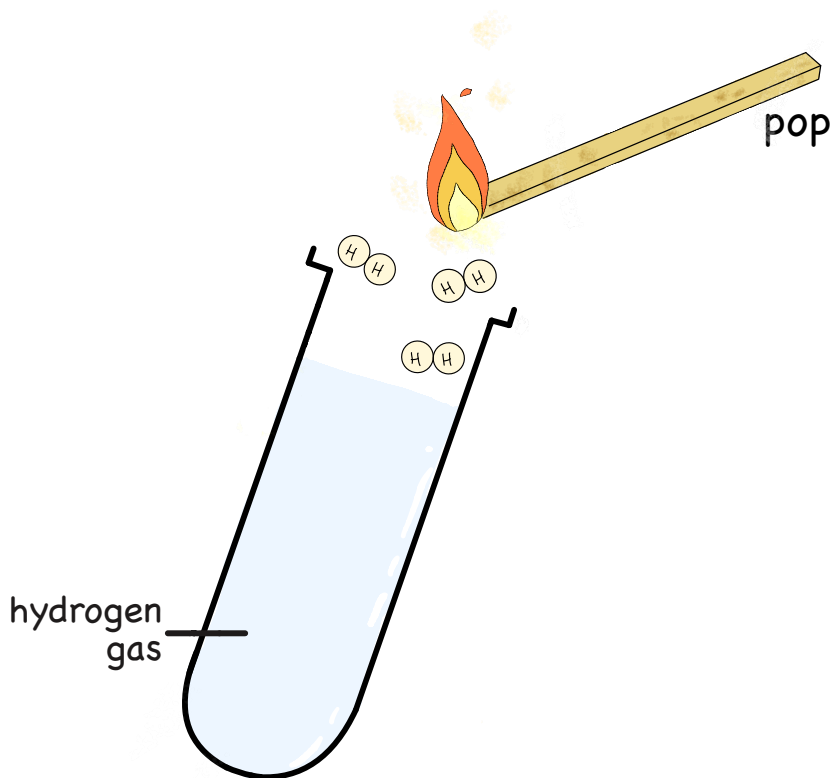

carbon dioxide test

- the gas is bubbled through limewater
- the limewater turns cloudy/milky
- this shows that carbon dioxide is present

Oxygen test

Hydrogen test

Carbon dioxide test
